Subject

California Prune Counties - 2016 Crop Year Prune Reference Date and Average Dry Count per Pound

This Informational Memorandum establishes the 2016 crop year Prune Reference Date and provides Approved Insurance Providers with the average dry prune count per pound for calculating second-period immature prune appraisals.

Each year the Davis Regional Office (DRO) establishes the Prune Reference Date. This date occurs one to two weeks after prune pit tip hardening when 80 to 90 percent of the seed shows the presence of endosperm, a clear jelly-like substance at the bloom end of the seed.

The DRO also annually compiles prune industry data to determine the average dry prune count per pound for second-period immature appraisals. The appraised production to count for second-period immature appraisals uses the average dry prune count.

Effective for the 2016 crop year:

1. The Prune Reference Date for all applicable California prune counties for the 2016 crop year is April 26, 2016; and

2. The following tables shall be used to calculate second-period immature appraisals.

County	Dry Prune Count
Butte	61
Colusa	59
Fresno	62
Glenn	59
Madera	62
Merced	62
Santa Clara	62
Solano	58
Sonoma	58
Sutter	59
Tehama	59
Tulare	62
Yolo	58
Yuba	60

For counties not included on this list that insure prunes by written agreement, contact the DRO for the applicable dry prune count per pound.
