- 1 Projected Prices and Volatility Factors are applicable for the Enhanced Coverage Option (ECO) and the Supplemental Coverage Option (SCO), where available.
- 2 Projected Prices and Volatility Factors are applicable for Stacked Income Protection (STAX cotton only), where available.
- 3 The long grain projected price (conventional practice) is used as the price election under the terms of the Hybrid Seed Rice Crop Provisions.
- 4 In accordance with the Commodity Exchange Price Provisions (CEPP), the CBOT September rice contract is used to derive the projected rice prices since the November contract lacks sufficient volume and open interest activity.

Margin Protection

The following 2022 CY margin projected prices and volatility factors are approved for the Margin Protection plan. The margin projected price is used in conjunction with projected input prices and the expected county yield to derive the expected margin (per acre), trigger margin (per acre) and liability. The expected margins for each crop/county are available at the following web page on RMA's public website: webapp.rma.usda.gov/apps/actuarialinformationbrowser/

Please see the following web page on RMA's public website for program details: www.rma.usda.gov/Policy-and-Procedure/Insurance-Plans/Margin-Protection-for-Corn-Rice-Soybeans-and-Wheat
