- (20) Document any other pertinent information, including any data to support any factors used to calculate the production.

**(21) Document the computations used to calculate item 72 (Total APH Prod.) on the PW.**

**Section II: Determined Harvested Production**

- (1) When all acreage has been harvested, determine total production from warehouse receipts, packer/processor receipts, or farm management records (refer to the LAM for farm record requirements) verified by the adjuster and supported by written records from the first handler.
- (2) Account for all harvested production for all entities sharing in the crop except production appraised before harvest and shown in Section I because the quantity cannot be determined later.
- (3) For production that is sold, enter the name and address of the buyer, packing house, or processor as applicable in items 49 through 52. For fruit otherwise disposed of, indicate the method of disposition.
- (4) The insured shall maintain satisfactory records of all production sold. Verify any processing/packing house records.

**Reminder:** If acceptable sales records are not available refer to the LAM.

**Production Worksheet Standards and Elements (Continued)**

---

**Section II: Determined Harvested Production (continued)**

- (5) If additional lines are necessary, the data may be entered on a continuation sheet. Use separate lines for:
- (a) separate storage facilities;
  - (b) different buyers, packing houses, or processors,
    - (i) the insured should maintain satisfactory records of all production,
    - (ii) AIP shall verify any packing house or processor records,
    - (iii) in all localities, if the first handler was not a packer or processor, the production shall be determined by the adjuster on the basis of available records;
  - (c) varying shares, such as 50% and 75% shares on same unit; and
  - (d) harvested production from more than one insured practice (or type) and a separate approved APH yield has been established for each, the harvested production also must be entered on separate lines in items 47a through 66 by crop.

**Reminder:** If production has been commingled, refer to the LAM.

- (6) If any of the insured's harvested production records are not based on standard units of measure as defined in the CP (bins, boxes, or bushels), convert such harvested production to 35 pound boxes, 42 pound bushels, or 40 pound bushels, as applicable. Document conversion calculations in the Production Worksheet Narrative or on a Special Report, as applicable.
- (7) Bushel/Box-Bin Equivalents - If the insured's harvested production records are based on a "Bin Count" the following applies:
- (a) in localities where a "Loose Field Box" is the standard container, use 25 loose field boxes per bin as the standard equivalent for determining the gross amount of production unless the number of loose field boxes is determined to be different than 25. In such cases, use the determined boxes per bin.
  - (b) in localities where a "Bushel" is the standard container, the number of bushels per bin is the number established by the first handler (packing house or processor).
- (8) In all localities, if the handler was not a packer or processor, the production will be determined by the adjuster on the basis of available records.
- (9) There will generally be no harvested production entries in items 47a through 66 for preliminary inspections.
